

Complete HTML Beginner Notes

HTML Basics

- HTML = HyperText Markup Language used to structure webpages.
- Browsers display HTML content.
- Files saved as .html.
- HTML5 is the latest version.

HTML Structure

- DOCTYPE declaration at top.
- html tag is root.
- head contains title & meta.
- body contains visible content.

Elements & Tags

- Most tags have opening & closing.
- Some are standalone like br and img.
- Attributes provide extra info like id, src, href.

Text Formatting

- Headings h1 to h6.
- Paragraph using p.
- Bold and italic tags.
- Comments are ignored by browser.

Links & Images

- Anchor tag creates links.
- Relative and absolute URLs.
- Image tag uses src and alt.

Lists

- ul for bullets.
- ol for numbered lists.
- li for list items.

Tables

- table contains rows.
- tr for rows, th for headers, td for data.

Block vs Inline

- Block elements start new line.
- Inline elements stay in same line.
- div groups sections, span styles text.

Forms

- form collects user input.
- input types: text, password, radio, checkbox.
- select creates dropdown.
- submit sends data.

HTML5 Tags

- header, nav, section, article, main, footer.
