

PDF 11: JSTL

1. What does JSTL stand for?

- a) Java Servlet Tag Library
- b) JSP Standard Tag Library
- c) Java Standard Template Language
- d) JSP Syntax Tag List

Answer: b

2. JSTL was introduced in which JSP version?

- a) JSP 1.0
- b) JSP 2.0
- c) JSP 1.2
- d) JSP 3.0

Answer: c

3. What is the prefix for the JSTL Core library?

- a) fmt
- b) sql
- c) fn
- d) c

Answer: d

4. Which JSTL library handles number and date formatting?

- a) Core (c)
- b) XML (x)
- c) Internationalization (fmt)
- d) Functions (fn)

Answer: c

5. Which JSTL tag is used for conditional logic (like an if-else)?

- a) <c:if>

- b) <c:choose> with <c:when> and <c:otherwise>
- c) <c:condition>
- d) <c:switch>

Answer: b

6. Which JSTL tag loops over a collection?

- a) <c:loop>
- b) <c:repeat>
- c) <c:forEach>
- d) <c:iterate>

Answer: c

7. What does <c:set var="i" value="\${1}"/> do?

- a) Deletes variable i
- b) Sets the variable i to the value 1
- c) Outputs the value of i
- d) Declares a constant

Answer: b

8. Which JSTL library is used for reading and writing relational database data?

- a) Core (c)
- b) XML (x)
- c) Functions (fn)
- d) SQL (sql)

Answer: d

9. What does <c:out value="\${j}"/> do?

- a) Sets the variable j
- b) Removes variable j
- c) Outputs/displays the value of expression j
- d) Creates a loop

Answer: c

10. Which taglib URI is used to import the JSTL Core library?

- a) `http://java.sun.com/jsp/jstl/fmt`
- b) `http://java.sun.com/jsp/jstl/sql`
- c) `http://java.sun.com/jsp/jstl/core`
- d) `http://java.sun.com/jsp/jstl/xml`

Answer: c

11–20. (AJAX — PDF 12)

PDF 12: AJAX

11. AJAX stands for:

- a) Animated JavaScript And XHTML
- b) Asynchronous JavaScript And XML
- c) Advanced Java Application Extension
- d) Automated JavaScript Action Execution

Answer: b

12. AJAX is:

- a) A programming language
- b) A web server technology
- c) A development technique for creating interactive web applications
- d) A database tool

Answer: c

13. What object does AJAX use to send and receive data?

- a) `HttpRequest`
- b) `XMLHttpRequest`
- c) `AJAXRequest`
- d) `FetchRequest`

Answer: b

14. The main advantage of AJAX over traditional web apps is:

- a) AJAX requires no JavaScript
- b) AJAX allows pages to be updated without a full page reload
- c) AJAX works without a server
- d) AJAX loads all data at once

Answer: b

15. Which of the following is a disadvantage of AJAX?

- a) It is slower than traditional web apps
- b) The browser back button may not work as expected
- c) It cannot use XML
- d) It requires Java on the server

Answer: b

16. In AJAX, "A" stands for Asynchronous. This means:

- a) The browser freezes while waiting for the server
- b) The page reloads completely after each request
- c) Requests can be made without blocking the user interface
- d) Only one request can be made at a time

Answer: c

17. What is the last step in the AJAX call flow?

- a) Creating the XMLHttpRequest object
- b) Sending the request to the server
- c) Updating the HTML DOM with the server's response
- d) Defining the callback function

Answer: c

18. What does `readyState == 4` mean in an XMLHttpRequest?

- a) Request not yet sent
- b) Request in progress
- c) Response headers received
- d) Request complete and response is ready

Answer: d

19. In AJAX, the server response data format is commonly:

- a) Only XML
- b) Only JSON
- c) Only plain text
- d) XML, JSON, or plain text — any format can be used

Answer: d

20. AJAX is described as being independent of server technology because:

- a) It only works with Java servers
- b) Any server-side language (Java, Ruby, CGI etc.) that accepts HTTP can be used
- c) It bypasses the server completely
- d) It uses a fixed server protocol

Answer: b

PDF 13: JDBC

21. JDBC stands for:

- a) Java Data Bridge Connector
- b) Java Database Connectivity
- c) Java Dynamic Backend Compiler
- d) Java Distributed Base Classes

Answer: b

22. JDBC classes are found in which Java package?

- a) java.net
- b) java.io

- c) java.sql
- d) java.db

Answer: c

23. Which JDBC driver type is 100% Java and most efficient?

- a) Type 1
- b) Type 2
- c) Type 3
- d) Type 4

Answer: d

24. What is Connector/J?

- a) A Type 1 JDBC driver for Oracle
- b) A JDBC Type 4 driver for connecting Java to MySQL
- c) A connection pool manager
- d) A JNDI configuration file

Answer: b

25. What is the correct order of basic JDBC steps?

- a) Load driver → Define URL → Establish connection → Create statement → Execute query → Process results → Close connection
- b) Connect → Query → Load driver → Process
- c) Open connection → Load driver → Execute → Close
- d) Create statement → Load driver → Connect → Query

Answer: a

26. Which JDBC method is used to execute a SELECT query?

- a) executeUpdate()
- b) executeQuery()
- c) execute()
- d) runQuery()

Answer: b

27. What does a PreparedStatement offer over a regular Statement?

- a) It is slower but more readable
- b) It is precompiled, making it more efficient and safer against SQL injection
- c) It only works for SELECT queries
- d) It automatically commits transactions

Answer: b

28. What does connection.setAutoCommit(false) do?

- a) Enables auto-commit mode
- b) Closes the connection
- c) Turns off auto-commit so multiple statements can be grouped as a transaction
- d) Rolls back all uncommitted changes

Answer: c

29. Which method permanently records changes to the database in a transaction?

- a) connection.flush()
- b) connection.save()
- c) connection.rollback()
- d) connection.commit()

Answer: d

30. What does ResultSet.next() do?

- a) Closes the ResultSet
- b) Goes to the previous row
- c) Moves the cursor to the next row and returns true if a row exists
- d) Executes the next query

Answer: c
