

A report of the effectiveness of the LMS implemented at SSSIHL

Report submitted by: Students of II B. Com.

Report submitted to: The Vice-Chancellor, SSSIHL

Report submitted on: 6th February 2021

Table of Contents

Executive Summary	1-2
Objectives	3
Background	4
Methodology	5-6
Constraints	6
Results & Conclusion	7
Recommendations	7

Annexures

- 1. Questionnaire**
- 2. Interview Questions**
- 3. Results of the survey in the form of graphs & tables**

Executive Summary:

The study was undertaken to evaluate the effectiveness of the LMS of SSSIHL implemented in Aug 2020. Questionnaires, interviews and structured feedback were used to receive responses from students, faculty and parents respectively. Despite a few constraints, the data received was analysed and it has been found that a majority of users are satisfied with the LMS. A few suggestions to improve effectiveness include continuing this practice even after offline classes commence, providing periodic training sessions to improve efficiency of users, and allowing student-representatives to be editors to support Faculty with less tech-know-how.

Objectives of the study/ report

- To evaluate its performance in the previous semester
- To avoid glitches faced

- To improve user-friendliness
- To increase efficiency of all stakeholders

Background

Online education at SSSIHL began on 3rd Aug. 2020 with the aid of e-guru, a Moodle-based LMS (Learning Management System), because of the prevailing pandemic situation and the lockdown that followed. Background work began three months in advance. A lot of hard work went into the implementation of the LMS from the administrators, IT personnel, and Faculty members. The infrastructural support came from the Sri Sathya Sai Central Trust. Once the Course Pages were set up, training was given to all faculty & students about how to effectively use the LMS. Now after a whole semester of usage, this evaluation report will present facts about its efficiency & improvements needed, if any.

Methodology

Random sampling in the ratio 10:3 was done to collect responses from students through questionnaires. Quota sampling was done to select Faculty respondents through interviews.

The questionnaire and the interview questions were designed keeping in mind the following points:

- Demographic details of the respondent
- User-interface related questions
- Feature-related questions
- Student-specific questions
- Practical implementation related questions
- Problems faced, Suggestions & Improvements

Annexure 1 gives the questionnaire

Annexure 2 gives the questions used for the interview

The Questionnaires were emailed to the students, and the interviews of Faculty were conducted online through G-Meet by selected student representatives.

Third person points of view/ feedback was considered for objectivity. Students acting as correspondents were asked to take a structured feedback from their parents and siblings.

Data collected through Interviews, Questionnaires and feedback were collated, analysed and interpreted.

Annexure 3 results of the survey in the form of graphs & tables

CONSTRAINTS

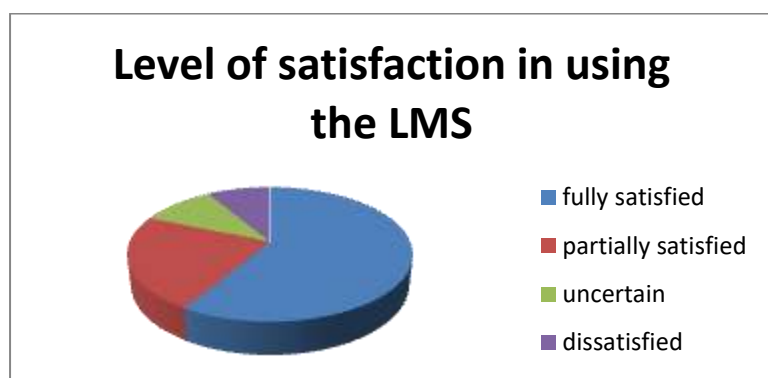

- All the students who received the Q did not respond.
- Many interviewees gave vague & evasive replies.
- Third party evaluation seemed biased, depending on individual experiences.
- It was tedious and time-consuming to follow-up stakeholders to respond.

- Some respondents seemed to have interpreted the questions subjectively.
- Some responses seemed to be dishonest in fear of consequences.

Results & Conclusion

Although the LMS posed challenges in the beginning, it seems to have become an established and reliable approach to teaching-learning now.

METHODS	RESPONDENTS selected	Responses received
QUESTIONNAIRE	223 STUDENTS	200 students
INTERVIEW	20 Faculty members	20 Faculty members
STRUCTURED FEEDBACK	180 parents 60 Siblings	150 parents 50 siblings

Recommendations

- Continue this practice even after offline classes commence
- Provide periodic training sessions to improve efficiency of users
- Allow students representatives to be editors to support Faculty with less tech-know-how
